MULTI-PROBE WORKSTATION FOR THE IMAGING ROOM

SonoMax VET

Keep up to five probes connected for a mixed imaging list. View the scan on the main monitor while adjusting controls on a separate touchscreen.

5 ports	23.8 in	15.6 in
Illuminated probe connectors	Main HD display	Control touchscreen

Scanning workflow

Set up for the list — Keep probes in place between abdominal and cardiac studies. Five illuminated connectors make the ports easy to identify.

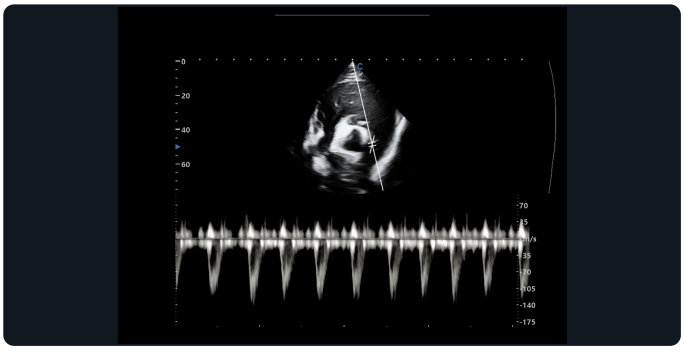

Adjust for the operator — Raise or lower the console through 25 cm and tilt the touchscreen through 30 degrees to suit the working position.

Study cardiac motion — Use multi-gate Doppler to compare flow, and tissue Doppler, strain and strain-rate imaging to assess myocardial motion.
